DETAILED ACTION

1. The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

Claim Rejections - 35 USC § 112

2. The following is a quotation of the first paragraph of 35 U.S.C. 112:

> The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

3. Claims 1 to 20 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. The specification fails to provide a basis for the terminology now found in the claims as required by 37 C.F.R. 1.75(d)(1). Thus it is not clear what exactly is intended by the terms "annular surface having a uni-planar profile" found in Claim 1 and "step-wise manner such that said pair of opposing rollers are offset" found in Claims 9 and 17. One skilled in the art would therefore be unable to ascertain the meaning of these terms by reference to the description in order to determine when infringement might occur.

Claim Rejections - 35 USC § 102

4. Claims 1 to 20, as understood, are again rejected under 35 U.S.C. 102(b) as being anticipated by Knudson for the reasons set forth in the last Office action (mailed August 19, 2004).

As seen in Figure 9, roller 239 has a "uni-planar annular surface" which contacts and bends extending portion 217 of the seam. The opposing roller has annular surface 236, 237 which defines groove 238 in contact with the lower folded portion of the seam.

The rollers are mounted "step-wise" and "offset from one another" by being located on opposite sides of the seam, i.e., the roller axes of rotation lie in offset planes parallel to that of the seam.

Applicant's remarks in the response filed January 7, 2005 have been considered but are not found to be persuasive. Whether the Knudson tool is employed to fold a seam for connecting adjacent panels, as shown, or for joining edges of a duct formed by bending a unitary sheet of metal is of no consequence in claims to the tool itself since the seam can be the same in either instance.

Conclusion

5. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of

the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
